

CRS 3000

Quick Service System for Smooth, Efficient Service.

OPERATE WITH CONFIDENCE

The advanced capabilities of the CRS 3000 system meets the information and security needs of quick service restaurants. The CRS 3000 system provides increased efficiency, accuracy and improved customer service for single store or multi-unit operators.

CRS 3000... Designed for Quick Service Restaurants

Low Profile, Space Saving Design

The attractive and compact CRS 3000 will compliment any food service counter. About the size of a legal note pad and less than six inches high, the CRS 3000 will use only about one half the counter space of other quick service systems.

Fast, Accurate Order Entry

With CRS's unique pop-up screens, you can automatically display selections for condiments, instructions, or flavors after you enter an item. Your operator can easily help your customer with their order, selecting only from the choices available, in the correct size or flavor, and at the correct price. Plus, you can use pop-up windows to prompt your operators to suggestive sell additional items.

Fast Employee Training

With menus, pop-up windows, and clear messages, the CRS 3000 is especially easy to learn. Operators can sign on in training mode for hands on practice. Totals are not disrupted and training time can be monitored.

Quick, Easy Menu Maintenance

Changing prices or adding new items? CRS 3000 programming screens are menu driven and easy to follow. You simply enter changes by typing on the keyboard using a special keyboard overlay. Keyboard modifiers provide the flexibility to handle large complex menus with extreme accuracy.

Effective Drive-Thru Function

A cashier on head-set can place orders or accept payment at any terminal. You can modify the order at any station, with changes reflected at the appropriate kitchen displays.

Drive-thru features include:

- Service time is reported for the system.
- Cars can be handled out of sequence.
- Multiple drive-thru lanes are supported.
- A separate tracking system is available for phone in orders.
- Integrated with drive-thru order confirmation systems.

Time and Attendance

A fully featured time and attendance system that provides payroll ready data for your in-house payroll system or payroll service. Built-into your POS system, you get critical labor reporting, including sales/labor percentage and transactions per man-hour. Information is easily accessible by store managers for real time staff management.

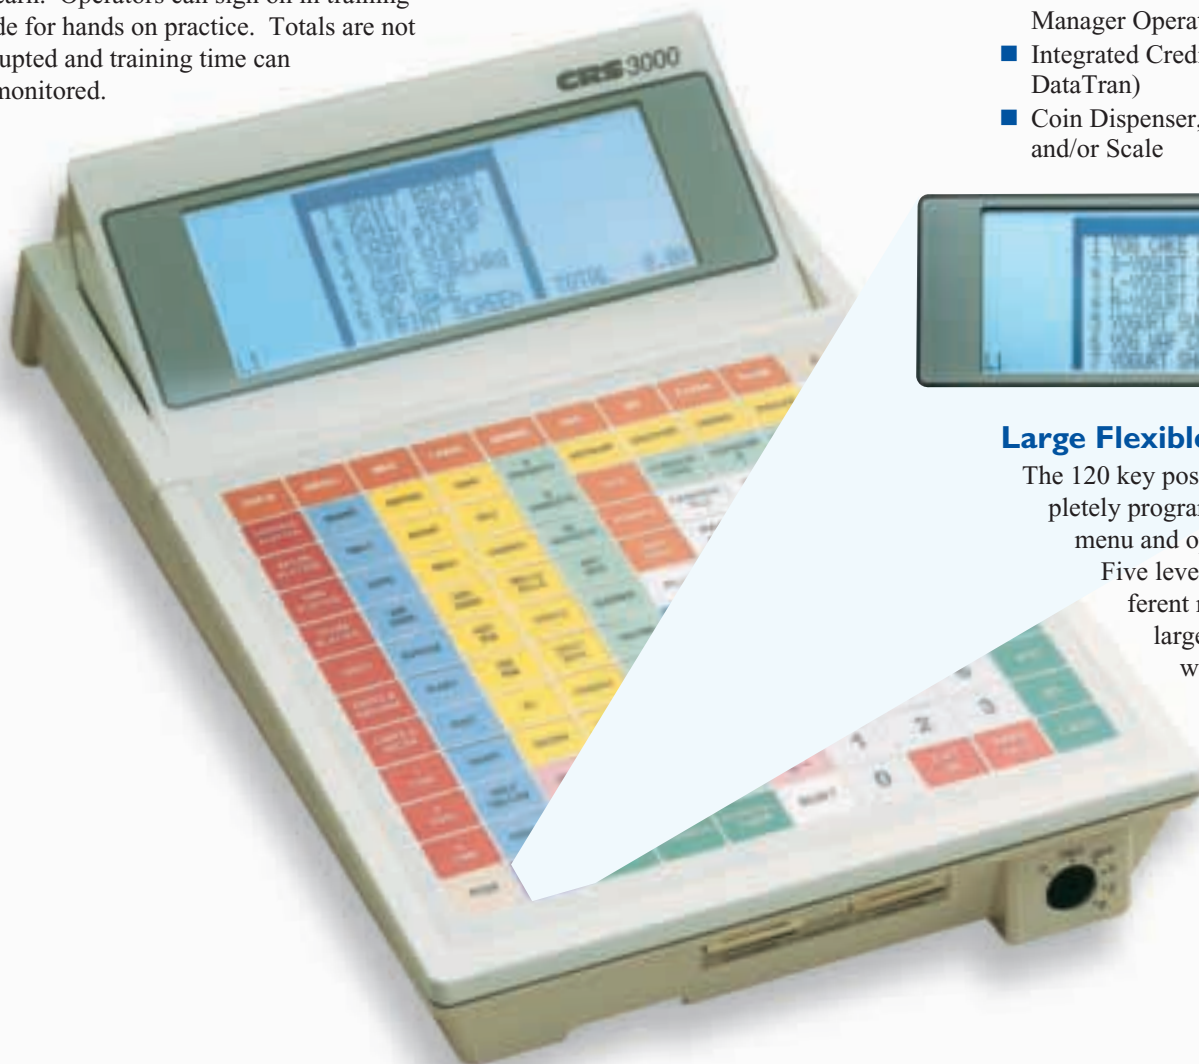

Inventory and Projections

Built-in inventory software provides store level ingredient inventory control. Sales histories by time and day are available to provide averages for projections. Ideal for chicken restaurants or other items with long prep times, projection reports help management improve customer service and reduce waste.

Flexible System Configuration

Configure your system exactly to your needs today, with flexibility to expand for the future. Peripherals supported include:

- Card Reader for Credit or Employee/Manager Operations
- Integrated Credit Authorization (requires DataTran)
- Coin Dispenser, Pole Display, and/or Scale

Large Flexible Keyboard

The 120 key position keyboard is completely programmable to your specific menu and operation requirements.

Five levels are available for different menus. If your menu is large, you can use pop-up windows to list condiments, instructions, or flavors on the screen, leaving keyboard space free for other menu items or functions.

Powerful Kitchen Video Requisition System

Items may be grouped, sorted, and displayed at different stations for drive-thru, food preparation or expeditor applications.

- Real-time— Menu items can be sent to the video on the fly to speed service.
- Color displays can show items in different colors for cooking, packing, priority or emphasis.
- Eight order screen format for cooking displays the items prepared only at that station.
- Four order screen format displays all items in the order for packing/expediting.
- Split screen format separates drive-thru and counter orders for quick packing or traying.
- Park screen format for the drive-thru holds orders for preparation while other cars move through.
- Bump bar and/or CRS 3000 keyboard control for clearing or parking orders.
- Order timing and reporting for drive-thru and counter sales.
- On screen key item consolidation for efficient food prep during busy periods.

Flexible Printing Capabilities

You can share system printers for several functions. For example, the kitchen requisition printer can also print your end of day reports and customer receipts.

Printer features include:

- Off the shelf RS232C printers are used for all printing tasks.
- Two-color print for receipts and kitchen requisitions.

- Journal print mode for tracking sales.
- Thermal print for very fast and quiet receipt printing with graphic logos.
- 40-columns wide for easy reading.
- Depot serviceable printers are easily interchangeable. (No switches to be set to identify a printer to the system).
